

Successful Portal Migrations

The challenge

Microsoft needed a technical expert to migrate its two legal web portals from Microsoft SharePoint 2007 to Microsoft SharePoint 2010. The client was most concerned with a well-planned migration; it did not want to risk losing any of its existing content, features, or functionality during the upgrade.

Making it happen

Xtreme's senior-level technical consultant performed a detailed analysis of the portals and created a comprehensive migration plan with mitigations for all potential issues, ensuring a successful migration. Once Xtreme's onsite and offshore technical resources were in place, they were able to structure the mitigation in a consistent and continuous work stream, delivering both portals within 5 months of the initial engagement.

Xtreme results

Following the successful migration, Microsoft made Xtreme a preferred vendor. Xtreme now engages regularly on the client's other technical projects and staffing requests. The upgraded portals operated in the same fashion as did the old system, but utilized vastly improved SharePoint 2010 services, such as Metadata, Taxonomy, and FAST Search for SharePoint. Xtreme proactively found and fixed issues in the less-frequently used portal areas.
